T.B.C. : B-BNT-M-HHQ-A

Serial No.

# TEST BOOKLET

Paper I

GENERAL ABILITY, GENERAL MEDICINE AND PAEDIATRICS

Test Booklet Series

Maximum Marks: 250

Time Allowed: Two Hours

#### INSTRUCTIONS

- IMMEDIATELY AFTER THE COMMENCEMENT OF THE EXAMINATION, YOU SHOULD CHECK THAT THIS TEST BOOKLET DOES NOT HAVE ANY UNPRINTED OR TORN OR MISSING PAGES OR ITEMS, ETC. IF SO, GET IT REPLACED BY A COMPLETE TEST BOOKLET.
- PLEASE NOTE THAT IT IS THE CANDIDATE'S RESPONSIBILITY TO ENCODE AND FILL IN THE ROLL NUMBER AND TEST BOOKLET SERIES CODE A, B, C OR D CAREFULLY AND WITHOUT ANY OMISSION OR DISCREPANCY AT THE APPRO-PRIATE PLACES IN THE OMR ANSWER SHEET. ANY OMISSION/DISCREPANCY WILL RENDER THE ANSWER SHEET LIABLE FOR REJECTION.
- You have to enter your Roll Number on the Test Booklet in the Box provided alongside. DO NOT write anything else on the Test Booklet.
- This Test Booklet contains 120 items (questions). Each item comprises four responses (answers). You will select the response which you want to mark on the Answer Sheet. In case you feel that there is more than one correct response, mark the response which you consider the best. In any case, choose ONLY ONE response for each item.
- 5. You have to mark all your responses ONLY on the separate Answer Sheet provided. See directions in the Answer Sheet.
- All items carry equal marks.
- Before you proceed to mark in the Answer Sheet the response to various items in the Test Booklet, 7. you have to fill in some particulars in the Answer Sheet as per instructions sent to you with your Admission Certificate.
- After you have completed filling in all your responses on the Answer Sheet and the examination has concluded, you should hand over to the Invigilator only the Answer Sheet. You are permitted to take away with you the Test Booklet.
- Rough sheets are appended at the end of the Test Booklet. 9.
- THERE WILL BE PENALTY FOR WRONG ANSWERS MARKED BY A CANDIDATE IN 10. THE OBJECTIVE TYPE QUESTION PAPERS.
  - (i) There are four alternatives for the answer to every question. For each question for which a wrong answer has been given by the candidate, one-third of the marks assigned to that question will be deducted as penalty.
  - (ii) If a candidate gives more than one answer, it will be treated as a wrong answer even if one of the given answers happens to be correct and there will be same penalty as above for that question.
  - If a question is left blank i.e. no answer is given by the candidate, there will be no penalty for that question.

- Endemic cardiomyopathy in children is linked to the deficiency of
  - (a) zinc
  - (b) cobalt
  - (c) selenium
  - (d) chromium
- 2. Beta-blocker therapy after acute myocardial infarction is contraindicated in which of the following conditions?
  - 1. Heart failure
  - Orthostatic hypotension
  - 3. Peptic ulcer disease
  - 4. Bronchial asthma

- (a) 1 and 2 only
- (b) 1, 2 and 4
- (c) 1 and 4 only
- (d) 2, 3 and 4
- The following congenital heart diseases. are associated with cyanosis except
  - (a) complete transposition of the great arteries
  - (b) single ventricle with or without pulmonic stenosis

- (c) hypoplastic left heart
- (d) atrial septal defect with mitral stenosis
- 4. A 34-year old non-diabetic, normotensive patient presents with acute severe retrosternal pain. The ECG shows ST elevation (≥ 3 mm) in anterior chest leads. Blood for CPK-MB, Tropin-T and AST are normal. A repeat ECG after 24 hours is normal. What is the likely diagnosis?
  - (a) Acute pericarditis
  - (b) Prinzmetal's angina
  - (c) Acute anterior myocardial infarc-
  - (d) Acute non-myocardial infarction
- 5. Which one of the following is characteristic of Opening Snap (on cardiac auscultation)?
  - (a) Low pitched, early diastolic
  - (b) High pitched, early diastolic
  - (c) High pitched, late diastolic
  - (d) Low pitched, late diastolic
- Sudden onset of cough followed by increased dyspnea is typical of
  - (a) Pneumothorax
  - (b) Lobar pneumonia
  - (c) Collapse of lung
  - (d) Acute pleurisy

- Multi-drug resistance tuberculosis implies resistance to at least
  - (a) any two antitubercular drugs
  - (b) Isoniazid and Ethambutol
  - (c) Rifampicin and Ethambutol
  - (d) Isoniazid and Rifampicin
- 8. A patient of pulmonary tuberculosis is on antitubercular therapy. He develops drug-induced hepatitis. Which of the following drugs is not responsible?
  - (a) Rifampicin
  - (b) Ethambutol
  - (c) Pyrazinamide
  - (d) Isoniazid
- 9. Which of the following is the best determinant of adequacy of alveolar ventilation?
  - (a) Arterial pO2 level
  - (b) Arterial pCO2 level
  - (c) Minute ventilation
  - (d) Presence of cyanosis
- 10. Which of the following is a DNA virus?
  - (a) Hepatitis A virus
  - (b) Hepatitis B virus

- (c) Hepatitis C virus
- (d) Hepatitis E virus
- Drug of choice for the treatment of Taenia solium and Taenia saginata infestation is
  - (a) Metronidazole
  - (b) Albendazole
  - (c) Niclosamide
  - (d) Diloxanide furoate
- 12. Very high serum transaminases (ALT/ AST > 1000 IU/L) are seen in the following conditions except
  - (a) Viral hepatitis
  - (b) Ischaemic liver injury
  - (c) Toxin-induced liver injury
  - (d) Alcoholic liver disease
- Necrotizing papillitis is a feature in all of the following conditions except
  - (a) Sickle cell disease
  - (b) Tuberculous pyelonephritis
  - (c) Diabetes mellitus
  - (d) Analgesic nephropathy

- 14. The characteristic abnormality found in the urinalysis of a case of acute glomerulonephritis is
  - 1. Granular casts
  - 2. Red cell casts
  - 3. Hyaline casts
  - 4. WBC casts

- (a) 1, 2 and 3
- (b) 1 and 4
- (c) 2 and 3 only
- (d) 2 only
- Most common mutation in Alport's syndrome is in COL4A5 gene, which is transmitted as
  - (a) autosomal dominant
  - (b) autosomal recessive
  - (c) X-linked
  - (d) variable, autosomal dominant or autosomal recessive
- Broad casts in urinary sediments is specific for
  - (a) acute renal failure
  - (b) rapidly progressive renal failure

- (c) chronic renal failure
- (d) asymptomatic urinary abnormality
- Amaurosis fugax refers to transient ischaemic attack involving the region of
  - (a) retina
  - (b) internal capsule
  - (c) brain stem
  - (d) cerebral cortex
- 18. Sub-acute combined degeneration of spinal cord results from the deficiency of which of the following vitamins?
  - (a) B<sub>6</sub>
  - (b) B<sub>12</sub>
  - (c) B<sub>1</sub>
  - (d) B<sub>3</sub>
- The following systemic diseases are typically associated with polyneuropathy except
  - (a) Diabetes mellitus
  - (b) Hyperthyroidism
  - (c) Uraemia
  - (d) Carcinoma bladder

- 20. A young boy with history of left ear discharge develops fever, headache, vomiting and focal seizure of right upper limb. The appropriate line of management is
  - (a) urgent CT head and antibiotics
  - (b) urgent EEG and antibiotics
  - (c) urgent Otoscopy and antibiotics
  - (d) urgent CBC (complete blood counts) and antibiotics
- 21. Which of the following blood disorders is not associated with a large spleen?
  - (a) Beta thalassaemia
  - (b) Chronic myeloid leukaemia
  - (c) Hairy cell leukaemia
  - (d) Sickle cell anaemia
- Megaloblastic anaemia may be caused by the following drugs except
  - (a) Phenytoin
  - (b) Methotrexate
  - (c) Pyrimethamine
  - (d) Amoxycillin-Clavulinic acid (amoxyclav)

- 23. Disseminated intravascular coargulations oulde (DIC) is characterized by the following except
  - (a) widespread bleeding/thrombosis
  - (b) prolongation of prothrombin time/ partial thromboplastin time
  - (c) high levels of fibrin degradation products
  - (d) high platelet count
- 24. Match List I with List II and select the correct answer using the code given below the Lists:

List I List II
(Disease) (Appropriate
Microbe)

A. Epidemic 1. Coxiella

- typhus burnetti
- B. Murine typhus 2. R. rickettsii
- C. Q fever 3. R. typhi
- D. Rocky mountain 4. R. prowazekii spotted fever

#### Code:

- 25. Which one of the following statements is not correct regarding the characteristics of HACEK organisms?
  - (a) Fastidious, fast-growing, grampositive bacteria whose growth requires an atmosphere of L-cysteine
  - (b) Known to cause severe systemic infections - most often bacterial endocarditis, which can develop on either native or prosthetic valves
  - (c) Normally reside in the oral cavity and has been associated with local infections in the mouth
  - (d) The cure rates for HACEK prosthetic-valve endocarditis appears to be high
- 26. A 50-year male quartz quarry worker presents with progressive dyspnoea on exertion. Which of the following is the likely pneumoconiosis?
  - (a) Asbestosis
  - (b) Byssinosis
  - (c) Silicosis
  - (d) Beryliosis
- 27. Splenectomised patients have an increased susceptibility to which one of the following infections?
  - (a) Entamoeba histolytica
  - (b) Giardia lamblia
  - (c) Streptococcus pneumoniae
  - (d) Aspergillous niger

28. Match List I with List II and select the correct answer using the code given below the Lists:

List I	List II
(Class of	(Anti retroviral
drugs)	agents)
A. Nucleoside	1. Stavudin

- A. Nucleoside analogue Reverse Transcriptase Inhibitor
- Nevirapine
- B. Nucleotide analogue Reverse Transcriptase Inhibitor
- 4. Tenofovir

Lopanavir

- C. Non-Nucleotide Reverse Transcriptase Inhibitor
- D. Protease Inhibitor

# Code:

	Α	В	C	D
(a)	1	3	2	4
(b)	1	4	2	3
(c)	2	3	1	4
(d)	2	4	1	3

- 29. Which one of the following is not characteristic of Vitamin-D resistant rickets?
  - (a) X-linked inheritance
  - (b) Renal stones
  - (c) Reduced calcium absorption from the gut
  - (d) Hypophosphatemia

- 30. A 8-year old child presents with itching on the scalp with loss of hair. A characteristic 'black dot' appearance is seen. Which of the following is the most likely cause?
  - (a) Alopecia areata
  - (b) Pediculosis capitis
  - (c) Tinea capitis
  - (d) Traumatic alopecia
- 31. Consider the following statements regarding leprosy:
  - Lepra reactions are not a feature of tuberculoid leprosy
  - Erythema nodosum leprosum often occurs following institution of chemotherapy
  - Elevated circulating level of tumour nectosis factor (TNF) is detected in patients with ENL
  - Lucio phenomenon occurs in untreated patients with tuberculoid leprosy

Which of the statements given above are correct?

- (a) 1, 2 and 3
- (b) 2. 3 and 4
- (c) 1, 2 and 4
- (d) 1, 3 and 4

32. Match List I with List II and select the correct answer using the code given below the Lists:

List II (Vector)
1. Aedes aegypti
2. Culex mosquito
3. Pediculus homo- nis carporis
4. Ixodes tick

# Code:

	A	В	$\mathbf{C}$	D	
(a)	1	4.	2	3	
(b)	2	3	4	1	
(c)	4	1	2	3	
.(d)	3	1	2	4	

- 33. As regards schizophrenia, which one of the following statements is not correct?
  - (a) Occurs in 0.5-0.8 per cent of general population
  - (b) Increasing parental age enhances the risk in the child
  - (c) If both parents are affected, the risk in their offsprings is above 90 per cent
  - (d) The illness may resemble severe and persistent neurosis

- 34. Consider the following statements regarding organo-phosphorus poisoning:
  - There is inhibition of cholinestrase function
  - In chronic exposure, there may be peripheral neuropathy
  - In acute poisoning, there may be muscular weakness
  - In intermediate syndrome, sensory functions may be affected

Which of the statements given above are correct?

- (a) 1, 2 and 3
- (b) 2, 3 and 4
- (c) 1, 2 and 4
- (d) 1, 3 and 4
- 35. Which one of the following is a specific antidote for opiate overdose?
  - (a) Fomepizole
  - (b) Flumazenil
  - (c) Naloxone
  - (d) Physostigmine
- 36. Which one of the following statements concerning catheter associated urinary tract infection is correct?
  - (a) Most catheter associated infections are symptomatic
  - (b) Routine antimicrobial prophylaxis is indicated

- (c) Microscopic bacteria correlates
   with significant colony count
   (> 10<sup>5</sup>/ml) in symptomatic cases
- (d) Skin organisms such as staphylococcus and streptococcus are the most common aeteological organisms
- 37. Which one of the following is not a feature of Type-I renal tubular acidosis?
  - (a) Lower tubule re-absorption of calcium
  - (b) Defective bicarbonate absorption in distal tubule
  - (c) Low serum potassium level
  - (d) Increased anion gap
- 38. Which one of the following is not a feature of Adult Polycystic Kidney Disease?
  - (a) Hypertension
  - (b) Intermittent renal colic
  - (c) Massive proteinuria
  - (d) Macroscopic haematuria
- Pin point pupil may be found in all of the following except
  - (a) Organophosphorus poisoning
  - (b) Morphine poisoning
  - (c) Pontine haemorrhage
  - (d) Paracetamol poisoning

- Pulmonary complications of rheumatoid arthritis include the following except
  - (a) Pulmonary nodules
  - (b) Mesothelioma
  - (c) Fibrosing alveolitis
  - (d) Pleural effusion
- 41. In a right-handed person, which of the following signs is not a characteristic feature of occlusion in the right middle cerebral artery?
  - (a) Left hemiplegia with left UMN VII cranial nerve palsy
  - (b) Left hemiplegia with aphasia
  - (c) Left hemiplegia with right anosognosia
  - (d) Left hemiplegia with left hemianaesthesia
- 42. Metoclopramide suppresses which of the following neurotransmitters in vomiting?
  - (a) Dopamine
  - (b) Serotonin 5-HT4
  - (c) Histamine
  - (d) Acetylcholine
- 43. The amyloid protein in primary systemic amylodoisis belongs to which of the following classes of fibril proteins?
  - (a) AA protein
  - (b) AL protein
  - (c)  $A\beta$  protein precursor
  - (d)  $\beta_2$  microglobulin protein

44. Match List I with List II vandoselectotheuide correct answer using the code given below the Lists:

List I			List II		
(Gl	obin		(Types of		
cha	chains)			aemoglobin)	
A. α <sub>2</sub>	$\beta_2$			1. Hb A <sub>2</sub>	
B. α <sub>2</sub>	$\gamma_2$			2. <b>H</b> b A	
C. α <sub>2</sub>	$\delta_2$			3. Hb F	
D. $\beta_2$ $\beta_2$			4. Hb H		
Code:					
	Α	В	$\mathbf{C}$	D	
(a)	4	3	1	2	
(b)	4	1	3	2	

- 45. Which one of the following is **not** a common feature of cystic fibrosis?
  - (a) Exocrine pancreatic insufficiency
  - (b) Azoospermia
  - (c) Distal gastrointestinal obstruction
  - (d) Polyneuropathy
- 46. A 60-year old male suffering from auditory hallucinations says that people staying upstairs were talking about him and conspiring against him. He filed a police complaint against them but the allegations were proved to be wrong. The most likely diagnosis is
  - (a) depression
  - (b) dementia
  - (c) delusional disorder
  - (d) schizophrenia

- Each of the following is true about the idiopathic primary pulmonary hypertension except
  - (a) it is usually associated with coronary artery disease
  - (b) it is more common in females
  - (c) it is usually asymptomatic to begin with
  - (d) it is characterized by autosomal dominant inheritance
- 48. Which one of the following is not correct about Wilson's disease?
  - (a) It is an autosomal recessive disorder
  - (b) Serum ceruloplasmin is low
  - (c) There is hepatolenticular degeneration
  - (d) Serum copper concentration is high
- 49. Which one of the following is not an aetiology of transudative pleural effusion?
  - (a) Mesothelioma
  - (b) Cognestive heart failure
  - (c) Cirrhosis
  - (d) Nephrotic syndrome
- 50. With reference to secondary tumours of the lung, which one of the following is **not** correct?

- (a) Diagnosis is made from Peractioxams Guide logical examination
- (b) Endobronchial deposits are common
- (c) These are usually multiple and bilateral
- (d) Quite often, there are no respiratory symptoms
- 51. A patient is being investigated for chronic diarrhoea. Small intestinal mucosal biopsy shows PAS positive foamy macrophages. The diagnosis is probably
  - (a) chronic amoebiasis
  - (b) chronic giardiasis
  - (c) Whipple's disease
  - (d) intestinal sarcoidosis
- 52. Consider the following modalities of treatment:
  - 1. Ballon dilatation
  - 2. Heller's operation
  - 3. Local injection of botulinum toxin

Which of the above is/are the treatment modalities for achalasia cardia?

- (a) I only
- (b) 1 and 2 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

- 53. Consider susceptibility to the following pulmonary pathogens:
  - 1. M. tuberculosis
  - 2. P. aeruginosa
  - 3. S. aureus
  - 4. Nocardia sp.

Which of the above is/are associated with long term glucocorticoid therapy?

- (a) 3 only
- (b) 1 and 4
- (c) 2 and 3
- (d) 2, 3 and 4
- 54. Match List I with List II and select the correct answer using the code given below the Lists:

List I (Clinical condition) List II (Clinical manifestation)

- A. Lepra reaction
- Koebner's
   phenomenon
- B. Herpes zoster
- C. Psoriasis
- 2. Erythema nodosum
- D. Pemphygus vulgaris
- Nikolosky's sign
- Chickenpox virus

# Code:

A B C D

- (a) 1 4 3 2
- (b) 2 1 4 3
- (c) 3 4 1 2
- (d) 2 4 1 3

- 55. In moderate severity obstructive runguide disease, the expected abnormalities include the following except
  - (a) ↑ Residual capacity
  - (b) ↓ Vital capacity
  - (c) ↓ FRC/TLC ratio
  - (d) FEV<sub>1</sub>/FVC < 70%
- 56. Rasmussen's aneurysm is a
  - (a) dilated vessel in a tubercular lung cavity
  - (b) dilation of the root of aorta in valvular stenosis
  - (c) dilated aorta in syphilitic affection
  - (d) dilated renal vessel in hypertensive renal disease
- 57. The following are important diagnostic skin manifestations of acute rheumatic fever:
  - 1. Erythema marginatum
  - 2. Subcutaneous nodules
  - 3. Oster's nodes
  - 4. Butterfly rash

Select the correct answer using the code given below:

- (a) 1, 2 and 4
- (b) 1 and 2 only
- (c) 2, 3 and 4
- (d) I and 3

- 58. Aortic regurgitation is characterized by
  - 1. Wide pulse pressure
  - 2. Angina pectoris
  - 3. Early diastolic murmur
  - 4. Loud 1st heart sound

- (a) 1, 2 and 3
- (b) 2, 3 and 4
- (c) 1, 2 and 4
- (d) 1, 3 and 4
- 59. Match List I with List II and select the correct answer using the code given below the Lists:

List I (Disease)

List II (Association)

- A. Dermatomyositis
- 1. Heliotrope rash
- B. Epidemic dropsy
- Hypernatraemia
- C. Arsenic poisoning
- Hyperpigmentation
- D. Diabetes insipidus
- 4. Dihydrosanguirine

# Code :

- A B C D
  (a) 1 4 3 2
  (b) 1 3 4 2
- (c) 2 4 3 1
- (d) 2 3 4 1

- 60. Each of the following antibiotics can be given orally except
  - (a) Azithromycin
  - (b) Amikacin
  - (c) Cefdinir
  - (d) Linezolid
- 61. Consider the following statements regarding Austin Flint murmur:
  - It is heard in severe aortic regurgitation
  - It is produced at the anterior mitral leaflet by the regurgitant blood during diastole
  - It is an evidence of associated mitral stenosis
  - 4. It is heard in aneurysmal dilatation of the ascending aorta

Which of the statements given above are correct?

- (a) 1, 2 and 3
- (b) 2, 3 and 4
- (c) 1, 3 and 4
- (d) 1 and 2 only
- 62. Two or more oligoclonal bands in cerebrospinal fluid are most often positive in
  - (a) acute bacterial meningitis
  - (b) multiple sclerosis
  - (c) subarachnoid haemorrhage
  - (d) polyneuropathy

- 63. A 30-year old male presented with fever, dry cough and weight loss of 6 months duration. The chest X-ray shows miliary pattern. The differential diagnosis includes all the following except
  - (a) tuberculosis
  - (b) Wegener's granulomatosis
  - (c) fungal infection
  - (d) sarcoidosis
- 64. Consider the following statements regarding a healthy adult:
  - Mean left atrial pressure is 12-20 mm Hg
  - Left ventricular end diastolic volume is between 70-100 ml/m<sup>2</sup>
  - Pulmonary vascular resistance is 20-120 dynes sec cm<sup>-2</sup>
  - Left ventricular ejection fraction at rest is 0.55 to 0.80

Which of the statements given above are correct?

- (a) 1, 2 and 3
- (b) 2, 3 and 4
- (c) 1, 3 and 4
- (d) 1, 2 and 4
- 65. In acute hypoxaemic respiratory failure, which of the following statements is correct regarding arterial blood gas analysis?
  - (a) PaO<sub>2</sub> is decreased and PaCO<sub>2</sub> is either normal or low
  - (b) PaO<sub>2</sub> is decreased and PaCO<sub>2</sub> is high

- (c) Both PaO<sub>2</sub> and PaCO<sub>2</sub> levels are markedly reduced
- (d) PaO2 is normal and PaCO2 is high
- 66. Match List I with List II and select the correct answer using the code given below the Lists:

List I	List II
(Clinical	(Association)
condition)	

- A. Hypothyroidism
- Prolonged P-R interval
- B. Rheumatic cordites
- Pin point pupils
- C. Subarachnoid haemorrhage
- Subhyaloid haemorrhage
- D. Morphine poisoning
- Hung-up reflex

# Code :

- A B C D
  (a) 4 3 1 2
- (b) 2 4 3 1
- (c) 1 2 3 4
- (d) 4 1 3 2
- Each of the following is a sign of impaired ventricular function except
  - (a) raised JVP
  - (b) narrow pulse pressure
  - (c) end-inspiratory lung crepitations
  - (d) tapping apical impulse

- **68.** Consider the following statements regarding coarctation of aorta:
  - It may be associated with Turner syndrome
  - It most commonly occurs near the insertion of the ligamentum arteriosum
  - It is twice as common in females than males
  - It may be associated with bicuspid aortic valve

Which of the statements given above are correct?

- (a) 1, 2 and 3
- (b) 2, 3 and 4
- (c) 1, 3 and 4
- (d) 1, 2 and 4
- 69. Which one of the following ECG findings is most likely to be seen at the time of cardiac arrest?
  - (a) Ventricular fibrillation
  - (b) Ventricular tachycardia
  - (c) Atrial fibrillation
  - (d) Paroxysmal atrial tachycardia
- 70. The most reliable indicator of recent Hepatitis-B infection in a convalescing patient is
  - (a) IgM Anti HBc
  - (b) IgM Anti HBe

- (c) HBs Ag
- (d) IgG Anti HBs
- 71. A 2-year old child presents with generalized muscle hypotonia and weakness. Distal muscles are affected more than the proximal muscle groups. Facial muscles are spared. Deep tendon reflexes are diminished. Electromyography reveals fibrillation pattern. The most likely site of involvement is
  - (a) anterior horn cell
  - (b) peripheral nerve
  - (c) neuromuscular junction
  - (d) muscle
- 72. Confirmation of the diagnosis of Hirschsprung disease is by
  - (a) barium enema
  - (b) sigmoidoscopy
  - (c) rectal biopsy
  - (d) family history
- 73. Subacute sclerosing panencephalitis is associated with which of the following viral infections?
  - (a) Mumps
  - (b) Measles
  - (c) Rubella
  - (d) Poliomyelitis

74. Match List I with List II and select the correct answer using the code given below the Lists:

List I	List II		
(Disease)	(CSF analysis,		

- A. Acute pyogenic meningitis
- B. Tubercular proteins with meningitis no cells
- C. Gullian-Barre syndrome
- D. Neurocysticercosis
- Elevated protein and cells (mainly polymorphs)

Normal CSF

 Elevated proteins and cells (mainly lymphocytes)

# Code :

	Α	В	C	D	
(a)	4	2	1	3	
(b)	4	3	2	1	
(c)	3	4	2	1	
(d)	3	4	1	2	

- 75. Pseudotumour cerebri is characterized by all of the following except
  - (a) increase in intracranial tension
  - (b) blurred vision and diplopia
  - (c) focal neurological signs
  - (d) self-limiting condition
- Vitamin K-dependant clotting factors include all the following except
  - (a) Factor II
  - (b) Factor VIII
  - (c) Factor IX
  - (d) Factor X

- 77. A mother brings her 2-year old boy with short history of pallor. Examination reveals pallor, petechiae and splenomegaly. Which of the following is the most likely diagnosis?
  - (a) Thalassaemia
  - (b) Acute leukaemia
  - (c) Hodgkin's lymphoma
  - (d) Idiopathic thrombocytopenic purpura
- 78. Match List I with List II and select the correct answer using the code given below the Lists:

List I	List II		
(Disease)	(Clinical feature)		
A. Acute	1. Recurrent		

- A. Acute lymphoblastic leukaemia
- l. Recurrent knee joint swelling
- B. Juvenile rheumatoid arthritis
- Lymphadenopathy with petechiae
- C. Thalassaemia
- D. Haemophilia
- Swelling of small joints of hands
- Hepatosplenomegaly with severe pallor

# Code:

		A	В	C	D
	(a)	4	1	2	3
	(b)	2	4	1	3
	(c)	2	3	4	1
	(d)	4	2	3	1

- 79. Which of the following cells in peripheral blood smear are necessarily increased in all haemolytic anaemias?
  - (a) Sickle cells
  - (b) Target cells
  - (c) Burr cells
  - (d) Reticulocyte cells
- 80. Which of the following is not a naturally occurring anticoagulant in the body?
  - (a) Protein C
  - (b) Protein S
  - (c) Antithrombin III
  - (d) Von Willebrand Factor
- 81. What is the earliest gestational age at which iodine trapping occurs in foetal thyroid?
  - (a) 4 6 weeks
  - (b) 8 10 weeks
  - (c) 12 14 weeks
  - (d) 16 18 weeks
- 82. Which of the following inborn errors of metabolism can give rise to thromboembolic manifestation in a child?
  - (a) Phenylketonuria
  - (b) Homocystinuria
  - (c) Galactosaemia
  - (d) Gaucher's disease

- 83. In an infant born to a HIV-infected Guide mother, at what age of child the ELISA test can reliably diagnose HIV infection?
  - (a) 3 months
  - (b) 9 months
  - (c) 12 months
  - (d) 18 months
- 84. The most likely diagnosis in a 2-day old neonate with indirect hyperbilirubinemia, positive direct Coombs' test and spherocytes on peripheral blood smear is
  - (a) Cephalhematoma
  - (b) ABO incompatibility
  - (c) Hereditary spherocytosis
  - (d) G-6-P-D deficiency
- 85. The triad of 'diarrhoea, dementia and dermatitis' is characteristically seen in the deficiency of vitamin
  - (a) Riboflavin
  - (b) Niacin
  - (c) Thiamine
  - (d) Pyridoxine
- 86. Hyperkalaemia can occur in all the following except
  - (a) Cushing's syndrome
  - (b) Crush injuries
  - (c) Renal failure
  - (d) Intravascular haemolysis

Your Personal Exams Guide

- 87. An asymptomatic 3-year old girl is brought to the emergency department after 2 hours of accidental kerosene ingestion. The appropriate management is
  - (a) gastric lavage
  - (b) inducing emesis
  - (c) chest X-ray and observation
  - (d) charcoal haemoperfusion
- 88. A 28-year old woman suffering from sickle cell anaemia marries a 31-year old with no abnormality. What are the respective probabilities to have (i) sickle cell disease and (ii) sickle cell trait in their offspring?
  - (a) 0% and 100%
  - (b) 25% and 50%
  - (c) 50% and 25%
  - (d) 25% and 25%
- 89. What is the naturally occurring form of vitamin D in the human skin?
  - (a) Calciferol
  - (b) 7 hydrocholesterol
  - (c) 25 hydroxy cholecalciferol
  - (d) 1, 25 dihydroxy cholecalciferol
- 90. Warthin-Finkelday giant cells in lymphoid tissue are characteristic of which of the following infections?
  - (a) Mumps
  - (b) Measles
  - (c) Congenital cytomegalovirus infection
  - (d) HIV infection

- Some antibiotics act as ionophores, which means that they
  - (a) interfere directly with bacterial cell wall synthesis
  - (b) increase cell membrane permeability to specific ions
  - (c) inhibit both transcription and translation
  - (d) inhibit electrophoretic separation of ions
- Polymerase Chain Reaction technique is used for
  - (a) DNA amplification
  - (b) DNA sequencing
  - (c) screening gene libraries
  - (d) synthesis of polymerases
- 93. In the hills, the soil erosion takes place due to rapid flow of rain water. It can be most effectively controlled by
  - (a) building dykes
  - (b) channelizing the water
  - (c) jhum cultivation
  - (d) terrace cultivation
- 94. The chemical substance "Taxol" is said to have curative value for malignant tumours. It is obtained from the
  - (a) shoots of Taxodium sp.
  - (b) roots and fruits of Taxodium sp.
  - (c) bark from stem of Taxus sp.
  - (d) roots of Taxus sp.

- Greenhouse gases are called as such because they
  - (a) are used in warming plant growth chambers
  - (b) help in maintaining atmospheric O<sub>2</sub> and CO<sub>2</sub> balance
  - (c) are produced by green photosynthesizing plants and are trapped in the Earth's atmosphere
  - (d) prevent the escape of heat waves reradiated from the Earth's surface
- 96. Bacillus thuringiensis is used to control
  - (a) bacterial pathogens
  - (b) fungal pathogens
  - (c) insect pests
  - (d) nematodes
- 97. Which group of algae can provide nitrogenous nutrients to paddy cultivation under natural field conditions?
  - (a) Blue-green algae
  - (b) Brown algae
  - (c) Green algae
  - (d) Red algae
- 98. Tissue culture technique can be used for
  - 1. developing virus-free plants
  - multiplication of elite genotypes of useful trees
  - production of secondary metabolites of plants

- (a) I only
- (b) 2 and 3 only
- (c) 1 and 3 only
- (d) 1, 2 and 3
- 99. Which one of the following is an appropriate description of mangrove plants?
  - (a) Large wood-yielding trees of the tropical forests
  - (b) Plants in marshy areas with breathing roots
  - (c) Succulent plants that can thrive in arid/desert areas
  - (d) Vast grassland areas interspersed with deciduous trees and thorny bushes
- 100. Consider the following:
  - 1. Ethylene dibromide
  - 2. Potassium meta-bisulphate
  - 3. Sodium benzoate

Which of the above is/are used as food preservatives?

- (a) 1 and 2 only
- (b) 3 only
- (c) 2 and 3 only
- (d) 1, 2 and 3

- 101. Rayon fibre is made from
  - (a) cellulose
  - (b) isoprene
  - (c) polyethylene
  - (d) polyvinyl chloride
- 102. Which of the following parts/spectra of solar radiation is/are mostly absorbed by the leaves of green plants?
  - (a) Infrared
  - (b) Red and blue
  - (c) Violet, indigo and orange
  - (d) Ultraviolet, green and orange
- 103. Other than nitrogen and oxygen, which one of the following is the most abundant gas in the Earth's atmosphere?
  - (a) Argon
  - (b) Carbon dioxide
  - (c) Hydrogen
  - (d) Methane
- 104. Among the following regions of India, which one receives the highest annual average monsoon rainfall from June to September?
  - (a) Gangetic West Bengal
  - (b) Eastern Uttar Pradesh
  - (c) Western Uttar Pradesh
  - (d) Punjab

- 105. In which one of the following types of forests is teak a dominant tree species?
  - (a) Tropical rain forest
  - (b) Tropical deciduous forest
  - (c) Tropical thorn and scrub forest
  - (d) Temperate forest with grasslands
- 106. Consider the following statements:
  - Carbon dioxide is released from the interior of the Earth during volcanic eruption.
  - Carbon dioxide corrodes the metal surfaces.

Which of the statements given above is/are correct?

- (a) 1 only 0
- (b) 2 only
- (c) Both 1 and 2 -
- (d) Neither 1 nor 2
- 107. With reference to the 'Protected Areas' in India, consider the following statements:
  - In a Wildlife Sanctuary, limited biotic interference is permitted.
  - A Biosphere Reserve is declared to conserve a few specific species of flora and fauna.
  - The boundaries of a National Park are defined by legislation.

Which of the statements given above is/are correct?

- (a) 1 only
- (b) 2 and 3 only
- (c) 1 and 3 only
- (d) 1, 2 and 3

- 108. Which one of the following pollutants causes surface deterioration of leather goods?
  - (a) Hydrogen sulphide
  - (b) Nitrogen dioxide
  - (c) Ozone
  - (d) Sulphur dioxide
- 109. The Finance Commission derives its authority from the
  - (a) Constitution of India
  - (b) Parliament of India
  - (c) President of India
  - (d) Supreme Court of India
- 110. Which of the following regions has the lowest atmospheric humidity?
  - (a) Equatorial
  - (b) Monsoon
  - (c) Prairies
  - (d) Polar
- 111. Cartagena Protocol on Biosafety deals with
  - (a) establishing or promoting in situ conservation facilities for rare and endangered organisms
  - (b) maintaining the worldwide network of gene banks for all the known flora and fauna
  - (c) monitoring and regulating the development of living modified organisms
  - (d) ensuring safe handling, safe use and safe trans-boundary movement of living modified organisms

- 112. Which one of the following is a secondary pollutant?
  - (a) Benzene
  - (b) Nitrogen oxide
  - (c) Ozone
  - (d) Sulphur dioxide
- A transition zone or region separating two biomes is known as
  - (a) ecocline
  - (b) ecological niche
  - (c) ecotone
  - (d) ecotype
- 114. Eutrophication of water bodies is mainly caused by
  - (a) carbonates and oxides
  - (b) hydrocarbons and metals
  - (c) carbonates and sulphates
  - (d) phosphates and nitrates
- 115. Consider the following:
  - 1. Coal pits
  - 2. Sewers
  - 3. Volcanic eruptions

Which of the above is/are the source/ sources of H<sub>2</sub>S in the environment?

- (a) 1 and 2 only
- (b) 2 only
- (c) 1 and 3 only
- (d) 1, 2 and 3

- 116. Which of the following is/are the source/sources of methane, a greenhouse gas?
  - 1. Cattle
  - 2. Rice fields
  - 3. Wetlands

- (a) I only
- (b) 2 and 3 only
- (c) I and 3 only
- (d) 1, 2 and 3
- 117. As per the Constitutional provisions, if a Panchayat is dissolved, elections are to be held within
  - (a) 1 month
  - (b) 3 months
  - (c) 6 months
  - (d) 1 year

- 118. The release of which one of the following into ponds and wells helps in controlling the mosquitoes?
  - (a) Crab
  - (b) Dogfish
  - (c) Gambusia fish
  - (d) Snail
- 119. Consider the following statements:
  - Infant mortality rate takes into account the death of infants within a month after birth.
  - Infant mortality rate is the number of infant deaths in a particular year per 100 live births during that year.

Select the correct answer using the code given below:

- (a) I only
- (b) 2 only
- (c) Both 1 and 2
- (d) Neither 1 nor 2
- 120. In India, sovereignty resides in the
  - (a) Constitution of India
  - (b) People of India
  - (c) President of India
  - (d) Parliament of India
